TP PLM

# Manage your projects from A – Z

Make intelligence your asset.

A tailor-made lifecycle management solution adapted to the largest projects

Consistent project lifecycle management brings clarity to complex, large-scale construction and engineering work, whether domestic or international.

All stakeholders can better understand projects, control planning and budget and make more accurate forecasts.

one place and remains accessible during maintenance and, once the project is completed, during the decommissioning phase.

TP PLM (Project LifeCycle Management) ensures that all data is stored in

# Business workflows

The predefined standard workflow and the open workflow engine allow the implementation of processes specific to your company or the project.

## Privacy

Detailed management of user rights to limit access to only the data the user needs.

## Uniqueness of Information

A single source of information always up to date with the latest changes.

## FEATURES

### Bespoke project lifecycle management

Continued use of the TP PLM database until the maintenance phase.

Reinforced security thanks to precise management of access rights: each member of the team or external stakeholder only has access to the information that concerns him within TP PLM.

Uniqueness of information to maintain a single version of the truth, which can be referenced multiple times without fear of duplicates.

Internal and inter-company collaboration with confidentiality adapted to multi-company projects.

Structure the information in the form of trees corresponding to your business views.

Link metadata, documents, and equipment via TP PLM software to facilitate impact analysis.

## BENEFITS

### Continuity throughout the life cycle of the project

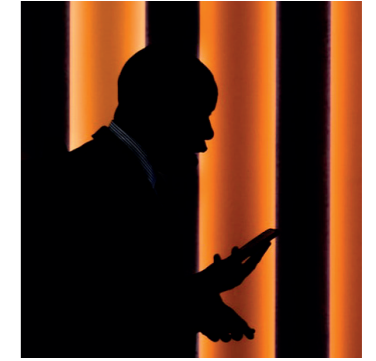

Gain in precision in your processes and in your reporting thanks to the monitoring of the evolution of information throughout the project.

Confidentiality preserved on all projects involving several teams with various levels of security.

Distinction between content and containers, making it possible to manage the life cycles of all types of objects.

Integration with BIM to formalize and facilitate the exchange of data via a digital BIM model including links to all project data.

Management of documentation and nomenclatures (BOM) to link data and structure it according to your business views.

## MOBILE APPS

### A global and secure view of data on the go

Management of the technical reference system, from design to decommissioning, including operation and maintenance.

The information collected by TP PLM provides you with the relevant data you need up to the maintenance and decommissioning phases of the project.

You have a single source of truth that can be referenced multiple times without fear of duplicates.

Thanks to an effective rights management system, team members, external service providers and other stakeholders only have access to the information managed in TP PLM that concerns them. This process makes internal and inter-company collaboration possible while maintaining a high level of security and reliability.

## About Thinkproject

Thinkproject is Europe's leading SaaS provider for Common Data Environment, Asset, BIM and Field Management, and Project Controlling. Thinkproject has been digitising construction companies, builders, project managers and planners for more than 20 years with powerful, flexible technology in combination with consulting expertise from knowledge of complex large-scale projects.

**With 700+ employees worldwide, Thinkproject offers digital solutions that cover the entire life cycle of a construction project.**
